twin under-sink water purifiers most popular - maximum value

The Twin Under-sink Water Purifier - Minimal maintenance, zero bench top clutter, incredibly affordable and super efficient - what more could you want!

This is our biggest selling system - a very efficient two-stage water purifying system that represents tremendous value for money.

Hidden away under the kitchen sink the twin filtration system quietly treats your drinking water with a two stage process. Pre-filtration reduces or removes sediment whilst second stage filtration reduces or removes chemicals and odours.

Product dimensions:
320mm x 230mm x 130mm

A range of filter cartridges that will remove particles down to 0.5 microns is available. All will efficiently and effectively take out or reduce impurities in the water including rust, dirt, and scale as well as chlorine, and most chemicals, herbicides and pesticides. With the 0.5 micron premium carbon filter, harmful bacteria such as Cryptosporidium and Giardia can also be effectively removed.

The Twin Under-sink system is also very easy on the eye... because you don't see it! Except for the stylish chrome plated faucet that sits on the kitchen bench top. (We have a great range of faucets including the one just perfect for your kitchen).

For more information contact Aquafresh Water Purifying Systems or your Aquafresh authorised representative.

All twin under-sink systems include a standard faucet (S Series - STANDARD, pictured left). If you would prefer to upgrade (additional cost), choose from the stylish options in our Designer Faucets brochure (pictured right), you'll find one that perfectly complements your kitchen décor.
