

# Water from the air!

dragon<sup>fly</sup>  
aquovate™ yourself

ARE YOU CONCERNED  
ABOUT THE FUTURE OF  
YOUR  
DRINKING WATER?

IF YOU DON'T LIKE WHAT IS  
GOING INTO OUR WATER

IN 2008

I.E.

FLUORIDE

&

RECYCLED SEWERAGE.

YOU HAVE A CHOICE. MAKE  
PURE WATER FROM THE

AIR!

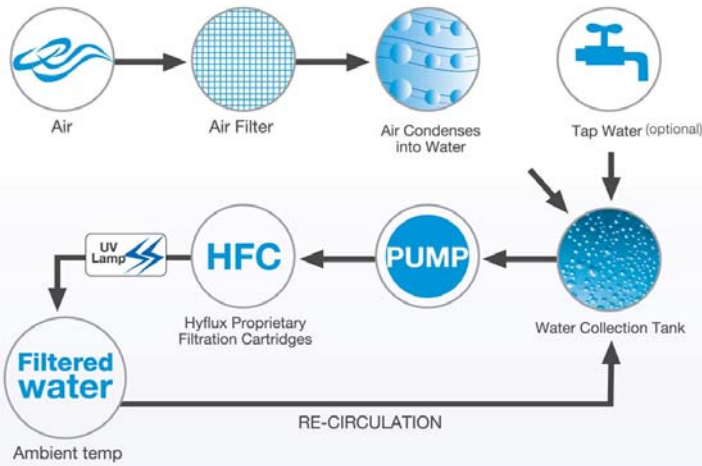

The Dragon<sup>fly</sup> Air-to-Water machine extracts it's water from the air, stores and filters it to make it a new, previously untapped source of **chemical free**, fresh drinking water. There is no need for plumbing, heavy plastic bottles or a tap. All you need is a standard power point and you are ready to make up to 30 litres# of pure water per day from the air.

*"Our bodies are comprised of around 70% water - so it makes sense that a pure body would start with pure water. You don't have to be a Doctor to work that out!"*

**Dr. Ramona Dalla Pozza**

# Chemical free, pure water. Just how it should be!

## HOW IT WORKS

## PRODUCT SPECIFICATIONS:

### M18 dragon-fly™

Dimensions -	380x410x700mm
Weight -	35 kg (Dry)
Storage Capacity -	7.5 Litres
Maximum immediate Dispensing Capacity -	6.5 Litres
Rated Power -	580 – 620W Max
Filtration System -	Pre-Carbon Filter (6 Months*) Ultra Filtration Membrane 0.1 microns (6 Months*) Post-Carbon Filter (6 Months*) Ultra Violet Light (12 Months*)
Maximum Water Production Capability -	30.2 Litres per day#
Water temperature when dispensed -	Ambient Temperature
Warranty -	12 Months manufacturers warranty with 4 year optional extended warranty

### Electrical Certification:

1. Air is pulled through an air filter removing most airborne contaminants & particles.
2. Water vapour in the air is condensed in much the same way as water condenses on the outside of a cold container when it is removed from a fridge. It is then collected in a 7.5 litre water storage tank.
3. An optional feature which allows you to tap in water from another source (tank water or town water) can be connected to ensure a constant supply of fresh water during high demand or low humidity periods.
4. Collected water is then pumped through a proprietary filtration system removing most of the extremely fine waterborne contaminants including bacteria, viruses, parasites & other disease causing agents down to 0.1 microns.
5. Filtered water is then passed over an Ultra Violet Light which further enhances the purification process.
6. Re-Circulation of the stored water, every 4 hours, when left unused, ensures that the water remains bacteria free without the use of foreign chemicals such as chlorine or ammonia, to keep the water fresh and pure every time.
7. When the water is dispensed it is once again pumped through all of the filters and past the Ultra Violet Light immediately prior to dispensing which gives the water that fresh and light taste, making it a pleasure to drink.
